**IPG Photonics' NEW YLPN Series** of nanosecond fiber lasers provides high peak power with scalable average output power up to 100 W, short pulse duration <2 ns at full operational repetition rate range of 10-300 kHz. The all fiber format allows for the adjustment of pulse energy and/or pulse repetition rate without affecting the output beam parameters. IPG's novel fiber laser is much more efficient and compact than conventional lasers now on the market and is ideal for applications in the solar/photovoltaic arena, resistor trimming and marking of transparent materials. The ultrashort pulse duration and high peak power result in a very small heat affected zone.
